

Implementing a Neural Net for Stock Forecasting

Helen and Anusha

December 9, 2019

Introduction

1. Stock forecasting is one of the most difficult tasks as there are so many factors involved
2. Stock market analysis can be divided into two components
 - 2.1 Fundamental Analysis: Includes the current financial health of the company as well as the current business environment
 - 2.2 Technical Analysis: Includes analyzing and predicting patterns based on historical stock prices/data
 - 2.3 In this project, we focus on Technical Analysis - analyzing the historical data to predict stock prices
